Abstract (en)

[origin: EP2965666A1] The invention provides a shelving device comprising a base (2), at least one moveable bottom shelf (7) mounted on said base, having an inserted position where she is introduced into a receiving space (90) defined by said base and a deployed position where she is remote to said receiving space, comprising a support plate (30) and a moving system (40) comprising at least one carrier (41) on which said support plate rests, at least one mounting interface (42) mounted on said base and at least one slide element (43) sandwiched between and attached to both said carrier and said mounting interface; said carrier, mounting interface and slide element being configured to allow the displacement of said carrier and of said support plate which rests on said carrier relative to said mounting interface and to said base on which said mounting interface is mounted.
