Abstract (en)
[origin: WO2016005055A1] The invention relates to a rod clamp for holding and moving a transverse rod for pedicle screws, comprising a first clamping element that has a recess at a distal end for inserting the transverse rod; and a second clamping element that includes a pressing portion on a distal end and is movably mounted on the first rod-shaped clamping element; wherein first and second rod-shaped clamping elements can be moved relative to one another in a translatory manner and the clamping force for holding the transverse rod is applied by means of the translatory movement.
