Abstract (en)
[origin: EP2966199A2] A spinning machine includes a drafting device (7), an air-jet spinning device (9), and a first driving section (31). The drafting device (7) includes plural drafting roller pairs, including a front roller pair (30), and drafts a fiber bundle (8). The air-jet spinning device (9) carries out spinning to twist the fiber bundle (8) drafted by the drafting device (7) to form a yarn (10). The first driving section (31) rotates, when the fiber bundle (8) is discontinuous between the drafting device (7) and the air-jet spinning device (9) before the start of the spinning, the front roller pair (30) in a direction opposite to a rotational direction during spinning.
