Abstract (en)  
A spacer element (1; 1') for a positioning system (100; 100'; 200) for covering elements (3, 4) comprises a base (5; 5') intended to be made to bear on a fixing adhesive for the covering elements (3, 4) and to receive and support a portion of a rear surface (3b, 4b) of two adjacent covering elements (3, 4), a plate (7; 7') extending transversely along a longitudinal axis (X) of the spacer element (1; 1'), the base (5) being intended to be interposed, in use, between facing edges (3c, 4c) of the two covering elements (3, 4), an intended breaking line (10; 10') being formed between the plate (7) and the base (5), comprising a threaded shaft (8) attached to the plate (7) on the side opposite the base (5), and an insertion aperture (11; 11') formed in the plate (7; 7') and adapted to allow the slidable insertion of a wedge (101).
