Abstract (en)

[origin: WO2015023598A1] An apparatus for adjusting the height of a furniture item can comprise a frame structure that includes a vertically positioned track member that extends a particular height. A furniture item can be in communication with the frame structure through the vertically positioned track member. Additionally, an adjustment guide can be in communication with both the furniture item and the frame structure. The adjustment guide can further comprise a driving mechanism that can cause the furniture item to change vertical location with respect to the frame structure.
