Abstract (en)
[origin: WO2014151121A1] A mattress and a monitoring system includes at least one surface layer of a mattress, at least one monitoring module supported by the mattress and located beneath the at least one surface layer, a memory supported by the mattress and including program instructions, and a processor supported by the mattress and operably connected to the at least one monitoring module and the memory. The processor is configured to execute the program instructions to detect a first change in an occupational status of the mattress using the at least one monitoring module, and to store occupational status data associated with the detected first change in the memory.
