Abstract (en)
[origin: WO2014138783A1] This invention relates to a bath or basin waste (10) that includes a tube (11) defining a flow passage (12) therethrough that may be selectively closed by a closure assembly (21) that is retained within said passage by its own weight. The tube (11) includes an inlet (13) at its upper end and an outlet (14) at its lower end, said tube terminating at its upper end in an outwardly extending flange (15). The closure (assembly 21) located within the flow passage (12) includes (50) for selectively closing said flow passage and an actuation device that is connected to said plug for effecting up and down movement of said plug relative to said flow passage between an open position in which said plug is up and a closed position when it is down, said plug having an upper face which is substantially flush with said upper face of said flange when in the open position and below said upper face of said flange when in the closed position.
