Abstract (en)

[origin: WO2014150549A1] A power saw includes a cutting arm, a blade guard pivotably supported by the cutting arm and movable to a closed position and an open position, a guard lock lever pivotably supported by the cutting arm and movable to a locked position and an unlocked position, and a guard lock release mechanism. The guard lock release mechanism includes a first release lever extending from the guard lock lever and a second release lever extending from the first release lever. The first release lever includes a first contact end configured to be manually pressed to move the guard lock lever from the locked position to the unlocked position, and the second release lever includes a second contact end configured to be manually pressed to move the guard lock lever from the locked position to the unlocked position.
