Abstract (en)

[origin: WO2013141773A1] Fastening device (1), for anchoring elements in an anchoring system for floating structures, comprised of at least one first attachment device (9) in which at least one elastic element (3) is connected, and at least one second attachment device (10) in which at least one anchoring element is connected. Attachment devices (9) and (10) are intended to be connected together and be mutually locked with at least one locking device (11). The first attachment device (9) includes at least one frame (14), which is provided with attachment elements (25) for attachment of the elastic element's (3) connecting parts (30), and that attachment device (10) includes at least one bracket support (37) which stretches from the one side of the frame (14) through holes in the frame (14) to the frame's (14) other side, where the bracket support (37) includes at least one attachment device for the anchoring element.
