Abstract (en)

[origin: WO2014107757A1] The invention relates to a container for transporting cargo in aviation, which container consists of a number of polymer or composite components that can be reversibly releasably connected to each other. According to the invention, a base (1) and two side frame parts (2, 2') are fastened on opposite edges of the base (1) perpendicularly to said base (1), at least three plate elements (4a, 4b, 4c) being inserted in the region between the side frame parts (2, 2'). The side frame parts (2, 2') are interconnected by means of at least two cross-members (3) that are oriented perpendicularly to the side frame parts (2, 2'). The base plate (1), the side frame parts (2, 2'), the plate elements (4a, 4b, 4c) and the cross-members (3) are reversibly releasably interlocked or force-locked.
