Abstract (en)

[origin: WO2014140063A1] The invention relates to a polymer foam, which can be obtained by extruding a composition, which comprises a) a polymer blend of polystyrene, polyphenylene oxide, and/or polyphenylether, b) at least one blowing agent, and c) at least one nucleating agent, and the use of said polymer foam to fill hollow bodies, in particular in the form of a profiled window element or profiled door element, with foam. The invention further relates to foam-filled hollow bodies, extrudates, and a method for producing the polymer foam.
