Abstract (en)

[origin: WO2014139976A1] A device is described for melt-spinning, drawing and winding up a plurality of synthetic threads having a spinning device, a cooling device, a drawing device and a winding device. The drawing device has a plurality of multiply wound godet wheel units for drawing off and drawing the threads, which, according to the invention, are oriented transversely with respect to the winding spindle of the winding device, wherein a frame wall which is oriented parallel to the winding spindle has a plurality of wall sections which are arranged offset in a horizontal plane for alternate mounting of the godet wheel unit.
