Abstract (en)  
[origin: WO2014139871A1] The invention relates to a method and a device for washing textile items to be washed, wherein the items to be washed (T) and a washing liquid (W) are introduced into a washing container (1). Then the washing container (1) is dually asymmetrically centrifuged. During the dual asymmetrical centrifuging, the washing container (1) is rotated about a first axis of rotation (A1), which extends outside of the washing container, and simultaneously about a second axis of rotation (A2), which extends through the washing container and is at an acute angle ( $\alpha$ ) to the first axis of rotation (A1). The washing process is thereby intensified and significantly accelerated.
