Abstract (en)

[origin: WO2014116172A1] The present invention relates to a heat exchanger device for conduction of thermal energy between a first and a second fluid, the heat exchanger device (1) comprising a first fluid chamber (19) for the first fluid, a second fluid chamber (21) for the second fluid, and a set of heat conducting plate members (7) arranged to be in contact with both the first and the second fluids to admit thermal transfer there between through the material of the plate members (7). The invention also relates to a ventilation system comprising such a heat exchanger, and to a method for producing the heat exchanger.
