Abstract (en)

[origin: US2014267282A1] A method for displaying visual information in a navigation system includes displaying a map of a geographic region including a first plurality of map features where each map feature in the first plurality of map features having an associated priority level that is below a predetermined priority level is displayed with a reduced level of detail. The method further includes identifying a second threshold in response to receiving an input signal from an input device and generating a second display of the map, the second display of the map including a modified visual depiction for at least one map feature in the first plurality of map features.
