Abstract (en)

[origin: WO2014145727A1] Systems, methods, and non-transitory computer-readable media can provide access to a first-level computing resource via a service catalog. In some instances, the first-level computing resource can be created by a first entity. Moreover, a second-level computing resource can be received. In some cases, the second-level computing resource can be created by a second entity based, at least in part, on the first-level computing resource. Access to the second-level computing resource can be provided via the service catalog. Relational information associated with the first-level computing resource and the second-level computing resource can be tracked.
