Abstract (en)

[origin: WO2014144796A1] Disclosed are methods, apparatus, systems, and computer readable storage media for interacting with one or more records via a single user interface. The user interface includes a publisher and an information feed. A user may request to interact with a first record from the publisher. Information may be submitted through the publisher to interact with the first record to update the record. A feed item may be presented for inclusion in the information feed based on the update, where the feed item includes one or more actionable selections providing a reference to the first record. When a user selects one of the actionable selections, the user can perform additional interactions with the first record or perform a new interaction with a second record.
