Abstract (en)
[origin: WO2014145270A1] A parking lot management system and method may include capturing image data and time of entry of a vehicle entering the parking lot and transmitting the image data and time data to a remote networked computer system. A vehicle identification is determined from the image data. Time and image data of the vehicle exiting the parking lot is determined and transmitting the remote networked computer system. A parking violation is determined due to a parking time period expiring without the vehicle exiting the lot prior the parking period expiring. A violation notice is communicated to the person associated with the vehicle identified to be in violation. A parking kiosk adjacent the parking lot can be provided. The kiosk is coupled to the remote networked computer system and is configured to set parking time, calculate payment and receive payment.
