Abstract (en)
[origin: EP2974608A1] The present disclosure relates to a protective glove (10) including a glove body (12) of flexible material having an outer visible surface (14) and shaped to define an inner housing for accommodating a hand of a user. The glove body (12) includes, or defines, a plurality of covering areas (15, 16, 17, 18) adapted to cover respective metacarpophalangeal articulation zones (20, 21, 22, 23). The protective glove (10) includes at least three adjacent protection elements (25, 26, 27) in the region of first, second and third areas (15, 16, 17, 18) covering the metacarpophalangeal articulation zones (20, 21, 22, 23) adjacent to the covering areas (15, 16, 17, 18). The three adjacent protection elements (25, 26, 27) are structurally independent of each other and a portion of the glove body (12) of flexible material situated between the adjacent protection elements (25, 26) acts as a connection zone or flexible connection bridge between the respective adjacent covering zones (15, 16, 17, 18).
