Abstract (en)

[origin: EP2975165A1] There is provided a method for knitting a cable pattern excelling in versatility. The following processes  $\pm$  to  $\prime$  are carried out assuming a region where a first stitch row 1 and a second stitch row 2 are lined in an FB is an intersecting region. In the process  $\pm$ , the first stitch row 1 is gradually moved toward an other-side base portion b2, and stitch rows b1, b2, 1 other than the second stitch row 2 are knitted. In the process  $^2$ , an empty needle is formed within a knitting width of the first stitch row 1. In the process  $^3$ , the stitches of the second stitch row 2 are moved to the empty needles in the intersecting region in the FB, and the stitch rows b1, b2, 2 other than the first stitch row 1 are knitted. In the process  $\prime$ , the stitch rows b1, b2, 2 other than the first stitch row 1 are knitted while dissolving the coexistence of the stitches of the first stitch row 1 and the stitches of the second stitch row 2.
