Abstract (en)

A bracket is disclosed for coupling a weapon accessory to a weapon. The bracket includes a bracket housing that defines a space for receiving a self-contained energy storage device, such as a battery or the like, and a means to transfer electrical energy from a self-contained energy storage device in the space to a weapon accessory mounted onto the bracket housing. The weapon accessory requires electrical energy to operate, but does not have its own built-in source of electrical energy. Instead, the weapon accessory receives the electrical energy it needs to operate from one or more self-contained energy storage devices in the bracket.
