Abstract (en)

[origin: WO2014146664A1] The present invention relates to an auxiliary device (16) adapted to be attached to a crutch (15), which crutch (15) comprises a rod-like body (11), an armrest (17) attached at one end of the rod-like body (18), and a handle (19) remotely placed from the armrest (17) and extending transversely from the rod-like body (11) at a front side of the rod-like body, wherein the device (16) comprises a substantially flat plate (10) provided with an attachment means (6,7) for attaching the device (16) to the crutch (15) at a rear side of the rod-like body (11), opposite the front side of the rod-like body (11), such that the substantially flat plate (10) can extend along a portion of the rear side of the rod-like body (11) such that the crutch (15) may lean on a support without falling. Also, the present invention relates to a crutch system, wherein the system comprises a crutch (15) and a device (16) as described above.
