Abstract (en)
[origin: WO2014146722A1] The invention relates to a high-pressure cleaning tool (10), comprising a motor pump unit (20), which is enclosed at least partially by a housing (14) and which has a motor (22) and a pump (24) for a cleaning fluid powered by the motor (22), and comprising a suction tube (56), which is connected to the pump (24), for a cleaning agent that can be mixed into the cleaning fluid and that can be fed to the pump (24) via the suction tube (56). In order to develop the high-pressure cleaning device (10) such that the suction tube (56) can be easily stored and protected against damage when not in use and is easily accessible to the user of the high-pressure cleaning tool (1) when necessary, the housing (14) has a tube compartment (52) for accommodating the suction tube (56), wherein the tube compartment (52) is covered by a tube compartment covering element (54), on which a free end (62) of the suction tube (56) or a filter element (64) arranged on the free end (62) of the suction tube (56) can be positioned and which has a passage opening (92), through which the suction tube (56) can be removed from the tube compartment (52).
