Abstract (en)
[origin: WO2014146788A2] The invention relates to a roofing system (US) which comprises a plurality of roofing elements (UE). Here, a longitudinal frame section (13) of the end element (10) is formed by an arch segment (6), wherein, as seen in side view, this arch segment (6) is bounded on its outer lateral surface by an arch and a tendon (16) extending in one plane with transverse edges (7) of the end element (10), wherein this arch segment (6) is designed to be stable in such a way that the end element (10) can be deposited by the outer lateral surface of its arch segment (6) on an underlying surface and wherein this arch segment (6) is designed to be stable in such a way that other roofing elements can be set into the end element (10) in such a way that they are in each case in contact by one of their longitudinal frame sections with an inner lateral surface (8) of the arch segment (6) of the end element (10).
