Abstract (en)
[origin: WO2014146966A1] An air-distributor valve, in particular for distributing cold air to various chambers of a refrigeration device, has a housing (1), which has at least a first and a second inlet (7, 9, 10) and at least a first and a second outlet (6, 16, 17), and has a control body (20) which can be rotated, in the housing (1) about an axis, between a first open position, in which said control body connects the first inlet (6) of the housing (1) to the first outlet (7) and blocks off the second outlet (16) from the second inlet (9), and a second open position, in which said control body blocks off the first outlet (6) from the first inlet (7) and connects the second inlet (9) to the second outlet (16).
