Abstract (en)

[origin: WO2014147030A1] The invention relates to a broadband multi-antenna system formed by at least two antennae having the same shape and size, which are positioned above a ground plane. The invention is characterised in that the antennae are connected to a modulator demodulator respectively, the part of each antenna (10b, 11b, 12b, 13b) furthest from the ground plane being folded at least once so that the folded part or the last folded part (10b, 11b, 12b, 13b) of the antenna forms an angle of between 10 and 100° with the non-folded part of the antenna.
