Abstract (en)

[origin: EP2977479A1] In this steel material satisfying a predetermined chemical composition and having a remainder comprising iron and unavoidable impurities, a complex oxide is contained containing REM, Zr, Ti, Al, Ca, and S, the complex oxide has no greater than 5.0/mm<sup>2</sup> of oxides having a circular-equivalent diameter of greater than 3 μm, and with respect to complex oxides having a circular-equivalent diameter of 0.1-3 μm, there are at least 100/mm<sup>2</sup> of complex oxides satisfying formula (1), and furthermore the average composition of the complex oxides that are 0.1-3 μm satisfying formula (1) is such that there is no greater than 20% of Al<sub>2</sub>O<sub>3</sub>, 3-20% of TiO<sub>2</sub>, 5-50% of ZrO<sub>2</sub>, 5-50% of REM oxide, 5-50% of CaO, and 1-15% of S. (where d is the circular-equivalent diameter of each complex oxide, and is 0.1-3 μm).
