Abstract (en)
[origin: WO2014155132A1] An article of luggage is disclosed comprising a base load container section defining a primary volume having an opening in a front face for receiving a load and a second lid section for cooperation with the base load section to enclose the primary volume, the base load container section being provided at one end with a number of wheel assemblies thereby defining a wheeled end, the second lid section defining a number of secondary volumes located externally of the primary volume for receiving additional loads, the secondary volumes being located at least in part within a footprint of the wheeled end. Such a construction allows a user to have the convenience of readily accessible storage means on a front of the suitcase, while the luggage is particularly stable about its wheeled end.
