Abstract (en)
[origin: WO2014154276A1] The invention relates to a suction device comprising a suction inlet (16) and a suction head (14) on which a suction unit (24) with a motor unit (28) is arranged and on which a filter device (20) is arranged, wherein a flow path (30) leads between the suction inlet (16) and the suction unit (24) through the filter device (20), wherein a filter holder (46) that holds the filter device (20) on the suction head is arranged on an outer side of the suction head (14), which positions the filter device (20) in the flow path (30) and is removable as whole with the retained filter device (20) from said suction head (14), and wherein the filter device (20) can be removed from the filter holder (46).
