Abstract (en)
[origin: WO2014155081A1] A method of manufacturing a packaging insert containing elongate elements, such as smoking articles. The method involves providing a first web having grooves running lateral to the direction of travel of the first web, each groove shaped to receive a single elongate element, and providing a second web over the grooves of the first web resulting in a series of individual pockets. In one embodiment, elongate elements are located in the grooves of the first web before the second web is fed over the grooves containing the elongate elements. In an alternative embodiment, the elongate elements are positioned in the individual pockets after they have been formed.
