Abstract (en)

[origin: CA2949406A1] The invention relates to a nozzle module (1) for an energy converter, in particular for a power plant, comprising a first nozzle (2) for introducing a propellant fluid into a mixing chamber (3) and an introduction opening (4) for introducing a suction fluid into the mixing chamber (3), wherein the mixing chamber (3) has a geometry for the flow-intensifying combination of the propellant fluid and the suction fluid in the mixing chamber (3). In order to specify a nozzle module (1) which effects an increase in the efficiency of the power plant, a vapor pressure of the propellant fluid before the first nozzle (2) according to the invention is lower than a vapor pressure of the suction fluid before the introduction opening (4), and a gas pressure in the mixing chamber (3) in a region (6) after the first nozzle (2) is lower than a gas pressure in the mixing chamber (3) in a region (7) after the introduction opening (4).
