Abstract (en)

[origin: WO2014154208A1] When using vending machines for dishes, the user has not only the quality of the products but also the preparation time as priorities. The present invention combines the collection of the selected product in a vending machine (10) with the closure of the microwave oven (30). A closure element (30) travels into the product store, is loaded therein and travels with the collected product into the microwave oven (30), which dispenses with putting down the product and later picking it up again.
