Abstract (en)

[origin: WO2014154579A1] The invention relates to a control module for an electric appliance, comprising a connection body (46) consisting of an electrically conductive material and a rod (59) for the power supply of the body, one end of the rod (59) being inserted into an opening (58) of the body (46), characterised in that the rod (59) is forcibly inserted into a cylindrical skirt of the conductive body, formed on the periphery of the opening (58).
