Abstract (en)
One embodiment of the present invention relates to a releasable powder skirt coupling system including a lower body garment, a skirt member, a plurality of garment couplers, and a plurality of skirt couplers. The garment couplers include a male post positioned circumferentially around the external surface waist region of the lower body garment within partially enclosed flap regions. The skirt couplers include a claw member positioned circumferentially around the bottom internal surface edge of the skirt member. The claw members are oriented away from the bottom edge. The claw members are configured to fit within the partially enclosed flap regions and releasably couple with the male post of one of the garment couplers.
