Abstract (en)

[origin: EP2979774A1] The present invention is directed to a method for manufacturing an annular formed body comprising a forging step of forging an alloy piece to provide a forged body having a disc shape, and a ring rolling step of ring-rolling an annular intermediate body prepared by forming a through-hole in the forged body to provide an annular formed body, characterized in that the forging step comprises at least two hot forging steps, each of the hot forging steps being carried out under the conditions that a strain rate is at most 0.5 s^{-1} , an absolute value μ_{\perp} of strain to the forged body in its circumferential direction is at least 0.3, an absolute value μ_h of strain to the forged body in its height direction is at least 0.3, and a ratio μ_h/μ_{\perp} between the absolute values of strain is within a range from 0.4 to 2.5.
