Abstract (en)

[origin: EP2980302A1] An improved joining element (1) is described, for a column of white goods, in particular for overlapping of at least one washing machine (3) and at least one laundry-drying machine (5), wherein said joining element (1) comprises at least one supporting structure (15) and at least one withdrawable element (19) sliding inside the supporting structure (15), the withdrawable element (19) being composed of at least one clothes hanger structure (191) and of at least one bearing plane (193) overlapped to the clothes hanger structure (191), the bearing plane (193) being slidable with respect to the withdrawable element (19) between a first operating position in which it covers the clothes hanger structure (191) of the withdrawable element (19) below, and a second operating position in which it at least partially uncovers the clothes hanger structure (191) below, and vice versa.
