Abstract (en)

[origin: CN105321252A] The invention relates to a terminal unit (116) and a method for machine verification of a security document (108) and a terminal. The terminal unit comprises a receiving port (206); a take-in mechanism (518, 522) used for taking in an opened security document into the receiving port automatically; an RFID card reader (606) configured to read data from an RFID chip (608) of the received security document as long as the RFID card reader and the RFID chip are located at reading positions (LP1, LP2); a type identification module (604) used for identifying the type of the document and determining the special position for the document type of the RFID chip in the opened security document according to the identified document type; a drive device (518, 522) enabling the RFID card reader and the received opened security document to move relative to each other automatically according to the determined position of the RFID chip to make the RFID card reader and the RFID chip located at respective reading positions; a verification module (610) used for reading data from the security document by using the card reader and verifying the security document according to the read data after arrival in the respective reading positions.
