Abstract (en)  
[origin: WO2014162073A1] The present invention relates to a compression band intended for being wound around a lower or upper limb. Specifically, the band includes at least one first (1) and one second (2) area having first and second longitudinal elasticities, respectively, the first and second areas being juxtaposed longitudinally, and a retaining means (3, 4) being provided in order to place the ends of said band vertically on top of one another in an adjustable manner, such as to adjust the compressive stress applied to said member.
