Abstract (en)

[origin: WO2014161628A1] A method for filling containers with a liquid filling medium supplied from a filling medium tank, wherein during filling the container is sealingly arranged against a filling element and during filling the interior of the container is connected to a flow duct in the filling element, via which gaseous and/or vaporous medium, preferably pressurizing gas, displaced from the interior of the container by the flow of filling medium is discharged as a return gas during filling, and via which, at the end of the filling phase, filling medium displaced from the interior of the container is channelled to a collection chamber.
