Abstract (en)
[origin: WO2014162747A1] In one embodiment, an inter layer reference picture set (RPS) is obtained from the bitstream, wherein no random access skipped leading (RASL) picture are included in the inter layer RPS if the current picture is a random access decodable leading (RADL) picture. In another embodiment, a previously signaled RPS is obtained. For a picture in the previously signaled RPS, a first flag (a keep picture flag) indication is obtained if the picture should be used as a reference picture for the current picture. If the first flag is positive, a second flag (a used by current picture flag) from at least one corresponding value of the previously signaled RPS is determined.
