Abstract (en)

[origin: WO2014161604A1] A technique comprising: controlling a radio receiver or radio transceiver of a communication device to receive via a first cell of a predefined collection of cells of a radio access network at least one device identifier for said communication device, wherein said at least one device identifier is specific to said first cell; switching said communication device to a state in which, for a period of time, said communication device refrains from informing said radio access network of a cell reselection to any cell within said predefined collection of cells; and controlling the continued storage of said at least one device identifier at said communication device for at least said period of time.
