Abstract (en)  
[origin: EP2982809A1] Integrated system (10) of insulation, ventilation and fixing for a roof (20) which, between the load-bearing structure (200) and the roof covering (210), has at least one base layer (100); wherein said base layer is a plasterboard panel, glued to the insulating panel (110), in such a way as to provide stability and stiffness to this composite making the laying fast and practical; an insulating panel (110) with symmetrical "L"-shaped lateral rabbeting (112) to form a "U"-shaped groove on the edge of connection of adjacent panels, with rabbettings parallel to the gutter line; a first omega-shaped metal element (120), integrated between the rabbeting, facing downwards to join the structure with through-screws (123) from its inside at the same time fixing adjacent panels; an insulating filling element (130) and sealing butyl tape (131); a second omega-shaped metal element (140), of ventilation, facing upwards; a possible closing layer (150), for the support of the roof covering.
