Abstract (en)

[origin: EP2983300A1] Embodiments of the present invention disclose a method for inter-terminal coordinated communication, a device and a system. The present invention relates to the field of communications, and inter-terminal coordinated transmission is accomplished by sharing specific information between coordinated terminals so as to improve performance of a system. The method provided by the embodiments of the present invention includes: obtaining, by a first terminal, a shared signal according to a signal received by the first terminal from a network side; and sending, by the first terminal, shared information to a second terminal, for enabling the second terminal to obtain information that the network side needs to send to the second terminal according to the shared information and a signal received by the second terminal from the network side, where the shared information includes the shared signal.
