Abstract (en)
[origin: WO2014165873A1] The invention relates to a drive device (1) for a furniture part (3) which can be displaced in a furniture body (2), comprising an ejection device (4) which can be locked in a locked position (V), said ejection device being used to move the moveable furniture part (3) from a closed position (SS) into an open position (OS). The ejection device (4) can be unlocked by pushing the movable furniture part (3) so that it moves into a pushed-in position (ÜS) which is beyond the closed position (SS) in the closing direction (SR), this enables the ejection device (4) to move the moveable furniture part (3) in the opening direction (OR); the moveable furniture part (3) can also be moved from the closed position (SS) into the open position (OS) by pulling said moveable furniture part (3), the ejection device (4) remaining in the locked position (V) when opened by pulling. Said drive device also comprises a coupling device (5) for coupling the drive device (1) to the moveable furniture part (3) or to the furniture body (2), when ejecting the moveable furniture part by means of the ejection device (4), the coupling device (5) assumes the coupling position (K), when opening by pulling, the coupling device (5) can be freely moved with respect to the ejection device (4).
