Abstract (en)

[origin: WO2014167245A1] The invention relates to a gaseous composition containing an active gaseous compound selected from the group made up of Xe and Ar to be used for preventing or minimising an ischaemia-reperfusion lesion of a biological material in a donor patient, while and/or immediately after taking a sample of said biological material from said donor patient, said gaseous composition being administered to the donor patient prior to taking the sample of biological material from said donor patient.
