Abstract (en)
[origin: WO2014167224A2] The invention relates to a spraying head (1) for a device for dispensing a fluid product, said spraying head (1) comprising a body (10) defining an ejection channel (11) ending in a dispensing opening (12), an insert (20) being arranged in said ejection channel (11), the downstream end of said insert (20) defining with the downstream end portion of said ejection channel (11), a spraying profile in the direction of flow of the product, said insert (20) comprising a resiliently deformable portion (21) suitable for deforming in order to absorb and/or compensate for the size variations of said body (10) and/or of said insert (20), and/or to compensate for deformations and/or movements of said insert (20) in said body (10), said resiliently deformable portion (21) of the insert (20) comprising axially and/or radially deformable tabs (210) and/or a portion (220) that is overmoulded with deformable material and/or one or more radial openings (230) passing through said insert (20) and/or at least one angled strip of deformable material (240).
