Abstract (en)

[origin: WO2014167203A1] The invention relates to an interior-trimming window (9) forming a panel (13) including at least one translucent wall (17, 19) and at least one polarizable film which is applied onto the wall (17, 19) and which is to vary the degree to which the panel (13) is opaque. The interior-trimming window (9) further includes a device for applying a voltage to the polarizable film, wherein the voltage application device includes at least one printed circuit provided with a flexible portion, the printed circuit being connected to a power supply circuit. A portion of the printed circuit is arranged beyond the area opposite the first outer surface (15) of the panel (13), said portion being rigid and/or flexible.
