Abstract (en)  
[origin: WO2014166686A1] A process for preparing an aqueous concentrated fabric conditioner composition, being an aqueous dispersion, comprising from 10 to 30 wt % of an ester-linked quaternary ammonium fabric softening active; water; and electrolyte; wherein the process comprises the steps of i) adding a proportion of the electrolyte before the addition of the fabric softening active to the water, and ii) adding a proportion of the electrolyte after the addition of the ester-linked quaternary ammonium fabric softening active leads to improved viscosity stability following preparation without loss of storage stability.
