Abstract (en)

[origin: WO2014166982A2] The invention relates to a device for producing a pattern combination on a clothing (1) comprising at least: a rotary screen (2), a cylindrical jacket surface of which has a perforation pattern that defines a first pattern component (A), wherein material in the liquid or pasty state is pressed through the perforations of the jacket surface of the rotary screen (2) and deposited on the surface of the clothing (1) in order to produce the first pattern component (A) on a surface of the clothing (1), while the rotary screen (2), rotating several times about a longitudinal axis thereof, rolls on the surface of the clothing (1) in at least one path that continuously revolves on the surface of the clothing (1) at least once; at least one means for synchronously and/or simultaneously producing a second pattern component (B), which means is connected indirectly or directly to the rotary screen; and a post-run system.
