Abstract (en)
[origin: WO2014167078A1] The invention relates to a receiver (20), comprising a receiver housing (21). The receiver housing has a fluid-receiving chamber (25), a fluid inlet (26), and a fluid outlet (27). A drier (36) is provided in the fluid-receiving chamber (25). The receiver is characterized in that an inlet channel (28) protrudes into the fluid-receiving chamber (25), which inlet channel has a channel outlet (30) in the fluid-receiving chamber (25) and conducts fluid into the fluid-receiving chamber (25) from the fluid inlet (26) as a channel inlet (31), the inlet channel (28) being shaped in such a way that the fluid flowing out of the channel outlet (30) flows out in a lateral direction. The invention further relates to a condenser having a receiver.
